

LEGALEASE — BRAINSTORMING & IDEA PRIORITIZATION

1. PROBLEM IDENTIFIED

Traditional legal document creation is expensive, time-consuming, and requires professional legal knowledge. Small businesses, freelancers, and individuals often cannot afford lawyers for routine documents like NDAs, lease agreements, or freelance contracts.

2. IDEAS GENERATED

Idea A: A library of pre-written legal templates (low innovation, no AI)

Idea B: A paid consultation platform connecting users to lawyers (high cost barrier)

Idea C: An AI-powered legal document generator using Generative AI (selected)

Idea D: A mobile app for legal document scanning and storage

3. PRIORITIZATION MATRIX

Idea C was selected based on:

- Feasibility: 9/10 (uses existing Gemini API, FastAPI, Streamlit)
- Impact: 9/10 (solves real accessibility problem)
- Innovation: 8/10 (GenAI applied to legal domain)
- Cost: 10/10 (free tier of Gemini API, no infrastructure cost)

4. FINAL SELECTED IDEA

LegalEase: An AI-powered legal document generator that creates customized NDAs, contracts, and agreements based on user inputs.
